## **Abstract**

The Nigerian government had introduced subsidy on petroleum products many years ago and had continue to do so despite enormous resources the subsidy continue to swallow. But, as the time goes on, it was realized that such subsidy on petroleum products could not be sustained by the state; and therefore, at various intervals the subsidies were removed on AGO and DPK; while the state continue to offer subsidies on PMS. Soon, the Nigerian state realized there is massive corruption on the subsidy coupled with its effect on the economy such as on the general performance of the state in terms of provision of services and infrastructural development. Based on these backdrops on the performance of the state, it was envisaged that removal of subsidy on PMS could end such reckless state's expenditure and curtail corrupt practices on the subsidy. Accordingly, the subsidy was finally removed without any consideration on its socio-economic implications on the Nigerians citizens.

This work explores the nature, causes and effects of the petroleum subsidy removal on the Nigerian citizens.

Excerpts: petroleum, subsidy, economy, corruption, resilience.

## Introduction

Nigeria, a country in West Africa, is blessed with abundant natural and human resources; chief among the natural resources is crude oil, being the principal export commodity which account for about 80% of the foreign exchange earned as revenue from the sales of two million barrels per day (2m bpd).<sup>1</sup> No doubt, Nigeria is among the top ten crude oil producing countries globally; hence, a frontline member of the multinational body of the Organization of Petroleum Exporting Countries (OPEC) which regulates oil price, supply and quantity worldwide so as to safeguard prices crashes due to oversupply of the product in the world markets.<sup>2</sup>

For a long time, Nigerian citizens have been enjoying the intervention of their state as subsidies are floated as regards to the welfare of its citizens; which forms part of the core provisions of the constitution of Nigeria which highlighted the importance of the general welfare of the citizens as contained in chapter II of section 14(2)b of the 1999 constitution (as amended).<sup>3</sup> This effort by the Nigerian state was often being thwarted by some unscrupulous elements in the petroleum business at the downstream sector, by inflating the figures as regards to the amount of litres consumed by Nigerian citizens, which is calculated and remitted to the marketers' accounts at specific intervals per annum as subsidies in line with constitution of the state as welfare for the citizens.<sup>4</sup>

Consequently, as the subsidies continues to be paid by the Nigerian state into the coppers of the marketers at the downstream sector, the amount being paid continues to swallow a sizeable amount of the Nigerian state revenues, to the extent that every year the budget of the state continues to records deficit. And as such, several attempts were made to cut down the amount of various subsidies offered in the petroleum sector at the downstream, so as to enable the government to improve its services in the provision of infrastructures and to boost industrialization among other targeted projects.<sup>5</sup>

It is alright for a sensible person to reason with the Nigeria state's mission and vision in regard to the subsidy removal. But, the stages and steps adopted by Nigerian leaders towards the actualization of the removal of the subsidy seems not feasible and impracticable at all; as was conceived by majority of the Nigerian citizenry. This effort of the Nigerian leaders to remove subsidies in the petroleum downstream sector met with fierce resistance. Series of protests were held against it as well as strikes were embarked upon in order to persuade the government to maintain the status quo as far as subsidy in the petroleum downstream sector is concern. Which at

the end, the state was made to reconsider the situation and made partial adjustments in the subsidy not outright removal.

Finally, on the 29<sup>th</sup> of May 2023, at the swearing in of the newly elected president, Bola Tinubu, he declared total removal of the subsidy as he had promised to during his campaign tours across Nigeria. This single act of the president elect at the swearing in ceremony, translates into many socio-economic crisis which continue to affect all facets of the Nigerian citizens lives, hence, a new wave of political tension and atmosphere of uncertainty ushered in politically, as citizens reverence for the regime has been waned due to the myriad negative effects of the petroleum subsidy removal.

### **History of Petroleum Subsidy in Nigeria**

Historically, the Nigerian economy has been subsidized in various ways for many years, and the subsidies floated by the Nigerian government are many of which include: agricultural inputs (fertilizer), education taxes, electricity, and foreign exchange among others.<sup>6</sup>

Subsidies in petroleum products were introduced in Nigeria in the 1970's as a response measure to the global oil prices shock in 1973, when the Arab members of the Organization of Petroleum Exporting countries (OPEC) imposed embargo against the countries supporting Israel during its war against Palestinians. In response to the situation, the OPEC member states imposed cuts on the supply of petroleum products to countries of which include countries as Netherlands, Portugal, Republic of South Africa and the United States of America.<sup>7</sup> So, the Nigerian government deems it fit to introduce petroleum subsidies so as to increase domestic consumption of the surplus petroleum products inwardly, and to boost industrialization through investments in the manufacturing sector that utilizes the products from petroleum such as gasoline, wax, and other chemicals needed for onward production of material needs in the country. To this end, prices of petroleum products were pegged and tied to local currency (Naira), and by the year 1977, petroleum subsidy was institutionalized following the promulgation of the Price Control Act of 1977, which made it illegal for some petroleum products (including petrol) to be sold over and above the government approved and regulated price.<sup>8</sup>

To further enforce compliance with the statute, various agencies and subsidiaries were established under the Nigerian oil company; the Nigerian National Petroleum Corporation (NNPC) to ensure the enforcement. Subsidiaries such as the Department of Petroleum Resources (DPR), Petroleum Products Pricing Regulatory Agency (PPPRA), and the Petroleum Equalization Fund (PEF) were

established. All these subsidiaries and their operations in enforcing the said laws regarding prices control and regulations were captured in the NNPC Act of 1977<sup>9</sup> as to ensure the subsidies are widely enjoyed by the Nigeria's teeming population, and the realization of the objective of the introduction of the subsidy in petroleum products in general.

Although, the idea of subsidy is from all perspective a noble one, but however, the process to ensure payment of the subsidies was hijacked by some government workers in the government petroleum industries who connived with the marketers' and continue to inflate the figures in respect of the amount of petroleum products being consumed on a daily basis within the state of Nigeria. This led the government of Nigeria to reconsider subsidies in order to cut the costs. First, diesel (AGO) was removed on the list of subsidies offered by the state in 2003. Thirteen years later, kerosene (DPK) subsidy was removed in 2016. But, the subsidy in premium motor spirit (PMS) continued on the belief that the most vulnerable population would be affected by the negative effects of the subsidy removal, such as inflation and difficulties in rendering services to the public through trade related crafts that uses PMS as a power source.<sup>10</sup>

### **Consequences of Petroleum Subsidy on the Nigerian Economy**

Although the subsidy on PMS continues until recently in the month of May 2023, the philosophy underlying subsidy in PMS was to ease hardships on the populace in sectors such as transportation of people, conveyance of goods in the remote areas within the state, and through such, the possibility of triggering inflation and deepening of poverty could be curtailed.<sup>11</sup> As such, subsidy in PMS continues, and is calculated by taking the subsidy per litre; and multiplying it by the quantity of the product consumed within the country for a period of one year.

Throughout the period of subsidy, the amount being paid as subsidy keeps on increasing to the extent that outrageous amounts were owed by the state as amount of PMS consumed on daily basis. According to reports, padding of the PMS daily consumption became the norm in the petroleum regulatory authorities such as the DPR and PPMC. It is worth to note that, even the Nigeria's national statistics body; the National Bureau of Statistics (NBS) does not know the actual amount consumed in Nigeria on a daily basis. Every agency of the state has its own estimated daily PMS national consumption figures, which continues to increase over and over each year. For instance; in the year 2002, the amount of litres consumed in Nigeria throughout the year was 21.45 million litres. In 2011, it rose to 29.3 million litres.<sup>12</sup>

<sup>10</sup> [www.pwc.com/ng](http://www.pwc.com/ng)

<sup>11</sup> J. Adeoti, et. al., *An Overview of the Fule Subsidy Regime in Nigeria :Compensation Mechanism for Fuel Subsidy in Nigeria*; a Report of the International Institute for Sustainable Development (IISD), 2016, Pp. 4-13

<sup>12</sup> E. Agbon, 'Fuel Subsidy and Daily Petrol Consumption Rate in Nigeria', *The Guardian*, 4 July, 2022

In an attempt to ascertain why the consumption continues to increase, it was found out that about 27.6 million litres of PMS was being smuggled daily to the neighbouring countries such as Niger Republic, Republic of Benin, Mali, Chad and Cameroon, just to mention but a few. Apart from the aforementioned irregular figure, there were false claims by different companies on subsidies on undelivered fuel.<sup>13</sup> These trends continue over the years to the extent that in the year 2022, the consumption rate was said to be around 65.7 million litres; whereas, the Nigerian National Petroleum Company Limited-NNPCL (formerly NNPC) gave the data of PMS consumption rate in Nigeria to be about 68 million litres from January to August in 2022.<sup>14</sup>

It is worth to note that, such subsidies come at great costs as spending on other development objectives is lower, and distribution of resources to the other tiers of government continues to shrink, as the huge amounts spent on subsidy goes to the better off Nigerians and their cohorts in the name of corruption malleably referred to as 'kickback'. This is evident, when we look at the amount of money spent from the year 2006-2018, which was ten trillion Naira,<sup>15</sup> and another 4.39 trillion Naira in 2022.<sup>16</sup>

Apart from the subsidy itself, efforts have been made in the past to rehabilitate the four existing refineries in Nigeria, so as to cut down the expenses of subsidy on petroleum; this swept a whopping sum of 11 trillion Naira from 2010 to 2022, and up to today, none of the refineries are operating on full scale capacity; hence, importation of the PMS remains the only option to satisfy Nigeria's PMS needs. This has inadvertently continued to devalue the local currency (Naira) against the pegged currency (US Dollar), which is used in the transactions of PMS in the global markets to the extent that the foreign exchange rate to one US dollar is almost equal to the highest note of Nigeria's money (1 US Dollar = 925 Naira as at 25<sup>th</sup> August 2023 at the Bureau Du Change). This constituted a trade deficit in the nation's economy, and made it a net importer of its needs despite having substantial crude oil reserves of about 37.1 billion barrels spread across the country.<sup>17</sup>

Also the petroleum subsidy in Nigeria is among the factors that led to the depletion of the nation's foreign reserves and over borrowing, which consequently led to debt over hanging. According to the central bank of Nigeria reports, Nigeria's gross external reserves have continued to decline, dropping by 1.1 billion to \$38.5 billion in May 2022.<sup>18</sup> The depletion was caused perhaps as a result of a combination of various effects which amongst are the low crude oil production below the

<sup>18</sup> Hope Moses-Ashike, 'Why Nigeria's External Reserves Continue to Shrink', *Business Day*, June 10, 2022

OPEC quota, and the rising cost of petrol subsidy by incurring more cost to import fuel products than we earn from exporting the crude oil itself.<sup>19</sup> This imbalance in the economy of Nigeria as a country with mono-cultural economy tied to crude oil, exposes it to price shocks and fluctuations, and thus, placed its economy in a fragile state, and always suffering from budget deficits over the preceding years. To avert the existing situation in Nigeria, the government was advised to urgently reverse the trend, by addressing the challenges to the lingering petrol subsidy quagmire.<sup>20</sup>

Socially, at the microeconomic level, Nigerians are to be the sole beneficiaries of petrol subsidy. But, the subsidy went on to benefit the rich economic classes and their cohorts, and to some extent the urban poor who rely heavily on PMS fuelled transportation means. This was so, because the local bourgeoisies' class continues to exploit the opportunity to sell imported Nigerian PMS across the borders of neighbouring countries at higher prices. This corrupt practice by the petroleum business class, gave them the opportunity to engage in what is called *round-tripping* by importing more refined PMS than they deliver to Nigerian consumers, then smuggled the residual supplies to neighbouring countries markets and sell at more market determined prices.<sup>21</sup> According to security survey on the amount of PMS smuggled out of Nigeria, it reported that about 788 trucks/tankers each with 33,000 liters capacity are being smuggled daily to neighbouring countries;<sup>22</sup> while at various intervals, Nigerians continue to face long days of queues and hardships in filling stations due to the effects of shortages of the product that has been subsidized for them.

Moreover, the elimination of subsidy brought challenges which led to the surge of petroleum prices from 150% to 200%,<sup>23</sup> of which the price of PMS rose from 500 to 615 Naira per litre across the entire country. Consequently, there has been a rise in charges on services related to small and medium sized enterprises services (SMEs). These enterprises that are affected include transportation, iron welding and fabrication, barbing and other trade related occupations. For instance, a taxi cab drop services within the Federal Capital Territory (FCT) Abuja before the subsidy removal was not more 900 Naira at most; but, nowadays, it rose to about 2000 Naira. More so, basic consumer goods and needs as foods and other necessities as laundry soap, detergent, toothpaste just to mention a few, are also affected by price increases as a result of high cost of PMS due to the elimination of subsidies in May 2023.

### **Resilient Measures Embarked Upon as a Result of Petroleum Subsidy Removal in Nigeria**

Resilience has been the case in most social settings, whenever there is hardship, adversity and frustrations; the individual and society at large are capable of survival, thriving and recovery.<sup>24</sup> This ability to bounce back from adversity, frustrations and uncertainties by the teeming Nigerian populace as a result of the petroleum subsidy removal had propelled the citizens' ability to go beyond their original level of functioning by opting for and devising proactive measures in order to function properly.<sup>25</sup>

One of the resilient measures embarked upon by the Nigerians as a result of petroleum subsidy removal is the development of a positive mindset and optimism to survive; and also prioritizing of needs. Many psychological experiments and studies have revealed that having a positive mentality is inherently linked to better business<sup>26</sup> and existential success. And based on the findings about the subsidy removal in Nigeria, many people have equipped themselves with the believe in the possibility of surviving despite the biting of the economy which causes prices to soar by concentrating only on the necessities which are categorized as needs apart from the wants of which are mere luxuries. Almost all households' breadwinners had cut down the expenses by prioritizing on necessities only. This has been the case by eliminating optional spending in products like outings and eating in restaurants instead of at home, weekend vacations and tourism among others. All the unnecessary expenses were suspended by families in order not become financially bankrupt as a result of the fuel removal subsidy. This measure had been embraced by the by the majority if Nigerians as it was also the advice from the International Monetary Fund (IMF) which emphasizes the significance of reevaluating and prioritizing expenses during times of economic stress.<sup>27</sup> This piece of advice had in fact been interpreted in different aspects of which include financial discipline by sticking to budget, increase another sources of income and embrace frugal habits of spending among other self financial skills in times of hardships.

On another note, the soaring prices of PMS had created an enabling market by utilizing low and non hydrocarbon clean energy sources such as electric cars (EV's), bio-fuels (organic extracts such as ethanol from sugarcane bark, Okra and maize) and solar powered technology alternatives. Thus, for instance, the utilization of compressed natural gas (CNG) by NIPCO Company in Nigeria which had converted 5600 petrol engines to CNG engines.<sup>28</sup> This had undoubtedly created alternative fuel sources to SME's, and at the same time continue to create million of jobs through the ever expanding conversion technology, which in the end would ensure proper utilization of

about 208.83 trillion cubic feet (TCF)<sup>29</sup> gas reserves in Nigeria instead of flaring it indiscriminately.

## **Conclusion**

By virtue of the philosophy underlying the subsidy removal in Nigeria, such as provision of infrastructure, undertaking of capital projects and increase in welfare and social services which form the basis of the idea of the subsidy removal; the necessary structures to support the people against the negative effects of the subsidy removal have not been studied and implemented before the removal of the subsidy so as to mitigate its multiple effects. Instead, the incumbent president was overwhelmed by the amount his government could have save from the nonpayment of the subsidy to PMS importers and marketers, which continue to create untold hardships to many Nigerians as the cost of living continue to soar, transportation costs tripled, and above all rising cost of units of products from the manufacturing sectors in addition to depleting the nation's foreign reserve and the depreciation of the value of the local currency (Naira).
